Huddle Philosophy

Union. Tactics. Strategy. Moral. Strength

The first thing the offence does I is get the players together on the field, where one of the players -the Quarterback, primarily responsible for the performance of the team- tells his team mates the play the trainer has decided to put into action.

To beat its rival the team must not give an inch of advantage, in short, it must demonstrate character.

In American football terms this gathering of the team is called a “Huddle”.

Almost all disciplines require working with and within groups, but it is in sports where the “team” concept acquires its real meaning. The reason is

Directing action, mobilizing effort, persisting with it, generating motivation to develop relevant strategies and alternative ways to achieve the objectives.

that all the “team” players have to coordinate their efforts to achieve the same objective. This allows leadership to build and develop. The true nature of sport is to create leaders and to develop people of high moral stature.

Football has the characteristics of developing and improving not only leadership but also, character, self discipline, effort, self-improvement, perseverance and maturity, in order to achieve a

truly integral development based on the concepts of moral, loyalty and confidence.

Moral is a feeling of team unity, of belonging, of shared emotions and shared aims, of having a common cause.

In sports, it can be found in a group of players who suffer, resist, overcome, share, and strife in a unified fashion with the intent of triumphing.

Moreover, setting the right goals is considered indispensable to generate action, and consequently the right behavior. Identifying what can realistically and objectively be carried out, with the aim of generating the necessary motivation and behavior is key to achieving the desired purpose.

We are fully aware that no simple method exists to achieve this lofty aim but when it is reached there is nothing that can beat such a team.

At Huddle Group we continuously apply these concepts to build and maintain our highly expert and motivated teams. Each member of the team has the capacity to clearly understand his role and how it fits within the general plan. He will have absolute confidence himself, his efforts and his ability to contribute to the objectives that have been set.

Our work as a team is based on group solidarity and the full integration of each individual. We strive to generate a positive mood and fighting spirit which allows us to collectively achieve a higher performance. By inspiring absolute confidence in the schedule to follow and maintaining active and decisive leadership behavior our teams overcome challenges with the conviction that they are following the path to success.

Who we are

Responsibility of the results

Huddle Group S.A. is a company founded in Argentina and dedicated to developing corporate solutions. It is conformed by a staff of highly skilled professionals specialized in leading edge technologies.

At Huddle Group we are focused on carrying out organized work that addresses our clients concrete needs.

We work hard to distinguish ourselves in terms of commitment, knowledge, quality, methodology and administration.

The Huddle Vision

Our team is oriented to the development of corporate solutions with a particular focus on managing projects which generate long term profitability.

Our experience with clients from a variety of industries allows us to offer developments which observe strict levels of quality.

In order to assure these high levels of quality we take responsibility for the leadership, planning and often times the development of the foundational architecture of different corporate solutions.

Objetives

Our objectives are directed to offering a work methodology and structure that improve the end results of the project.

We work diligently on:

- The project conception
- The vision and scope definition
- The analysis and definition of the architecture to be used
- In some cases accompanied by research into third party products
- The high level technical specification
- The methodology definition and customization and the life cycle of the project

We produce efforts level estimates and define roles and responsibilities that establish in detail milestones, timelines and necessary resources.

Additionally, we can establish possible training strategies while we are working on the project administration, risk management, and change request management.

We feel responsible for the end results and we assume all the typical challenges that are involved in the development of projects of technologies.

Services

Solutions in Corporate Technologies

In **Huddle Group** we train constantly to offer the highest quality services. Our staff is particularly highly trained and focused on **Microsoft Technologies**.

Within our teams we have experienced architects and higher experts in **Microsoft Enterprise Servers** products , including technologies such as:

- .NET Development languages (C#, J#, VB, C++)
- Distributed application Development Frameworks: MBI , Shadow Fax
- SOA architectures with implementations using web services
- Integration Architectures using Biztalk 2004
- Content Management Server

As our business is generating profitability whilst sharing in the project's challenges we get fully involved in order to align the participating teams in terms of our collective proactivity, knowledge, objective orientation and creativity.

Our Professionals have the necessary knowledge of the most important software engineering methodologies and the required project leadership abilities.

Part of the value we provide is derived from our use of best practices and proven models that aim to assure the projects success.

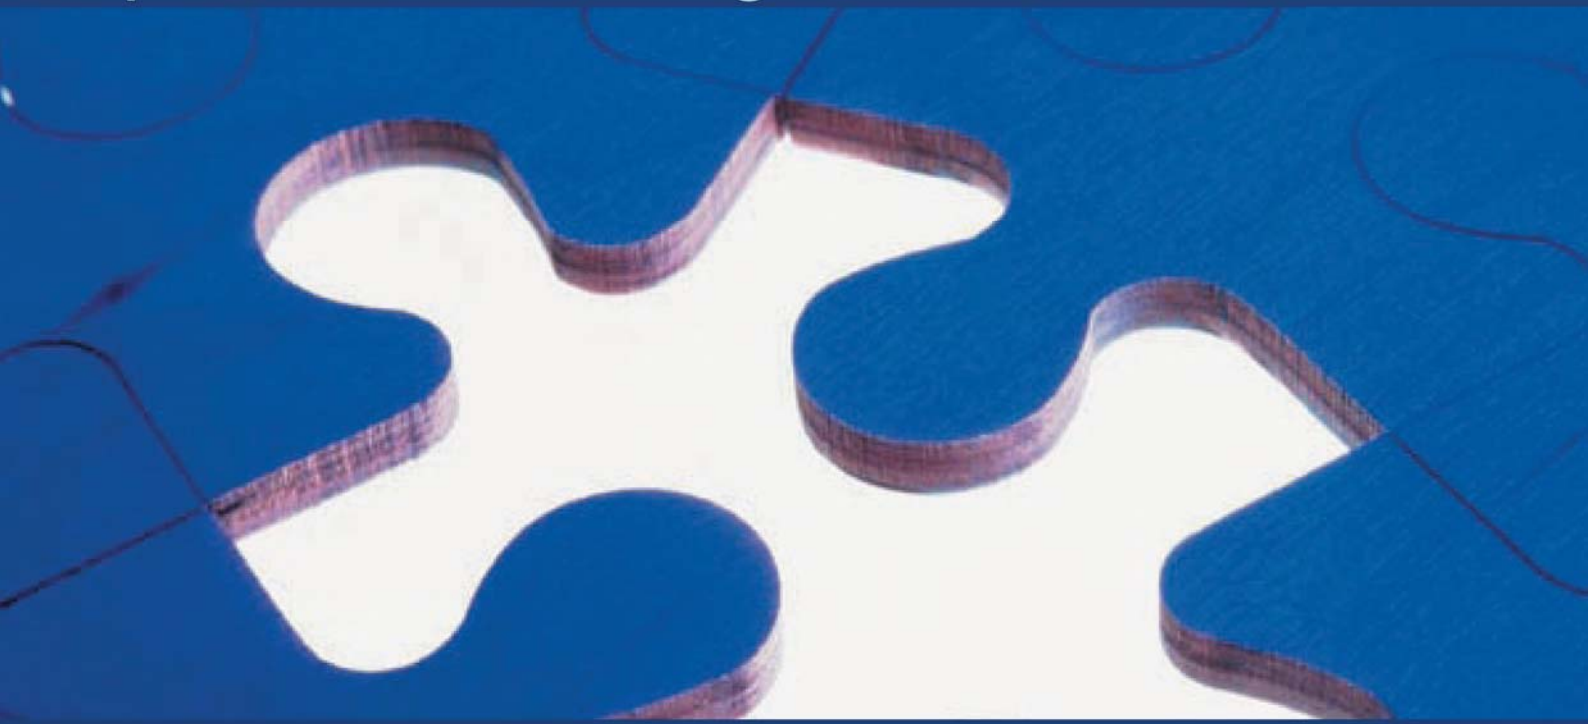

Our Professionals have the necessary knowledge of the most important software engineering methodologies and the required project leadership abilities.

- Commerce Server
- Sharepoint Portal, WSS
- PAG components and Best Practices

We are partners in facing the challenges of each project working together through consultancy or construction of technical solutions, frequently developing feasibility studies, proofs of concept, work estimates and planning.
